-!- FUNCTION: Visual signal transduction is mediated by a G-protein coupled cascade using CGMP as second messenger. This protein can coupled cascade using CGMP which leads to an opening of the cation channel and thereby causing a depolarization of rod photoreceptors. Induced a flickering channel gating, weakened the putch rectification in the presence of extracellular calcium, increased sensitivity for L-cis diltiazem and enhanced the CAMP efficacy of the channel when coexpressed with CNGA3. Essential for the generation of light-evoked electrical responses in the red-, green- and blue sensitive complex with CNGA3 (By similarity).

-!- SUBUNIT. Heteroollgomeric complex with CNGA3 (By similarity).

-!- SUBCELLULAR LOCATION: Integral membrane protein.

-!- SUBCELLULAR LOCATION: Integral membrane protein.

-!- DISEASE: Defects in CNGB3 are a cause of come degeneration (cd).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     .

                                                                                                                                                                                                                                                                                                                                                                                                                                             function. This autosomal recessive disorder occurs naturally in the Alaskan Malamute and German Shorthaired Pointer breeds. SIMILARITY: Belongs to the cyclic nucleotide-gated cation channel (TC 1.A.1.5) family. SIMILARITY: Contains 1 cyclic nucleotide-binding domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               PROSITE; SM00100; CNMP; 1.

Molecular cloning and functional characterization of a new modulatory cyclic nucleotide-gated channel subunit from mouse retina.";

TWO be activated by CAPP which leads to an opening of the cation coupled caecade using cGMP as second messenger. This protein can be activated by CGMP which leads to an opening of the cation channel and thereby causing a depolarization of rod photoreceptors. Essential for the generation of 19th-evoked photoreceptors. Essential for the generation of 19th-evoked colectrical responses in the red-, green- and blue sensitive cones (By similarity). Induced a flickering channel gating, weakened the outward rectification in the presence of extracellular calcium, increased sensitivity for L-cis diltiazem and enhanced the CAMP (CC) efficacy of the channel when coexpressed with CNGA3.

--- SUBUNIT: Heterooligomeric complex with CNGA3.
                                                                                                                                                                                                                                                                                                                                                                                                                                             This Swiss-Prot entry is copyright. -1- TISSUE SPECIFICITY: Retina, testis, kidney, heart and brain.
-1- SIMILARITY: Belongs to the cyclic nucleotide-gated cation channel (TC 1.A.1.5) family.
-1- SIMILARITY: Contains 1 cyclic nucleotide-binding domain.
                                                                                                                                                                                                                                                                                                                                                                                                                        TISSUE=Retina;

New polypeptide, useful for screening for modulators of cyclic nucleotide -gated ion channels, comprises the isolated cyclic nucleotide-gated cation channel 3 beta subunit.

Claim 12; Fig 4; 83pp; English.

The invention relates to human cyclic nucleotide-gated cation channel 3 beta subunit (CNG3B) polypeptides and polynucleotides. CNG3B is a member of cyclic nucleotide-gated cation channel (CNG) family. CNG3B forms

N

```
functional heteromultimers with CNGA1 and/or CNGA3, two CNG alpha subunits that are expressed in retina. CNG3B polypeptides are useful for screening modulators of CNG9 which are useful as contraceptives and retina treating various disorders involving cation channels, e.g. vision disorders and male infertility. Polynucleotides of the invention are useful for transfection of cells in vitro and in vivo, to correct acquired and inherited genetic defects, cancer and viral infections. Sequences of the invention are useful as reporter molecules in assays and detection systems, to measure changes in cation concentration, membrane potential, current flow, ion flux, transcription, signal transduction, reporter-ligand interactions and second messenger concentrations, in viro and ex vivo. They are useful to construct models of CNGs in a computer system and for examining expression and regulation of cation channels. The present sequence is human CNG3B protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     360
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  420

The invention relates to human cyclic nucleotide-gated cation channel 3 beta subunit (CNG3B) polypeptides and polynucleotides. CNG3B is a membra of cyclic nucleotide-gated cation channel (CNG) family. CNG3B is a membra of cyclic nucleide-gated cation channel (CNG) family. CNG3B polyments from the commitmers with CNG3A and/or CNGA3, two CNG alpha subunits that are expressed in retina. CNG3B polypeptides are useful for sortening modulators of CNGs which are useful as contraceptives and for treating various disorders involving cation channels, e.g. vision disorders and male infertility. Polynucleotides of the invention are useful as reporter molecules in insays and acquired and inherited genetic defects, cancer and viral infections. Sequences of the invention are useful as reporter molecules in assays and effection systems, to measure changes in cation concentration, membrane potential, current flow, ion flux, transcription, signal transduction, viro, in vivo and ex vivo. They are useful to construct models of CNGs in a computer system and for examining expression and regulation of cation channels. The present sequence is human CNG3B protein variant (R142K). Note: This sequence is not shown in the specification, but is derived from the human wild type CNG3B protein (SEQ ID NO:1) shown in Fig
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New polypeptide, useful for screening for modulators of cyclic nucleotide gated ion channels, comprises the isolated cyclic nucleotide gated cation channel 3 beta subunit.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Human, cyclic nucleotide-gated cation channel 3 beta subunit; CNG18; cyclic nucleotide-gated ion channel; contraceptive; vision disorder; male infertility; genetic defect; reporter-ligand interaction; CNG; viral infection; cancer; mutant; mutein; variant.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             DB 5; Length 809;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  /note= "Wild type Arg substituted with Lys"

The invention relates to human cyclic nucleotide-gated cation channel 3 beta subunit (CNG3B) polypeptides and polynucleotides. CNG3B is a member of cyclic nucleotide-gated cation channel (CNG) family. CNG3B is a member functional heteromultimers with CNGA1 and/or CNGA1, two CNG 3D forms subunits that are expressed in retina. CNG3B polypeptides are useful for screening modulators of CNGS which are useful as contraceptives and for treating various disorders involving cation channels, e.g. vision disorders and male infertility. Polynucleotides of the invention are useful for transfection of cells in vitro and in vivo. to correct useful contract and inherited genetic defects, cancer and viral infections. Sequences of the invention are useful as reporter molecules in assays and detection systems, to measure changes in cation concentration, membrane potential, current flow, ion flux, transcription, signal transduction, reporter-ligand interactions and second messenger concentrations.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    vitro, in vivo and ex vivo. They are useful to construct models of CNGs in a computer system and for examining expression and regulation of cation channels. The present sequence is human CNG3B protein variant (L673V). Note: This sequence is not shown in the specification, but is derived from the human wild type CNG3B protein (SEQ ID NO:1) shown in Fig 4 of the specification (AAE15982)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 APVINEYADAQLHNLVKRMRQRTALYKKKLVEGDLSSPEASPQTAKPTAVPPVKESDDKP 180

The invention relates to human cyclic nucleotide gated cation channel to beta subunit (CNG3B) polypeptides and polynucleotides. CNG3B is a member of cyclic nucleotide-gated cation channel (CNG) family. CNG3B forms functional heteromultimers with CNGA1 and/or CNGA3, two CNG alpha subunits that are expressed in retina. CNG3B polypeptides are useful for screening modulators of CNG8 which are useful as contraceptives and for treating various disorders involving cation channels, e.g. vision disorders and male infertility. Polynucleotides of the invention are useful for transfection of cells in vitro and in vivo, to correct acquired and inherited genetic defects, cancer and viral infections. Sequences of the invention are useful as reporter molecules in assays and detection systems, to measure changes in cation concentration, membrane potential, current flow, ion flux, transcription, signal transduction, reporter-ligand interactions and second messenger concentrations, in vivo and ex vivo. They are useful to construct models of CNGs vitro, in vivo and ex vivo. They are useful to construct models of
                                                                          New polypeptide, useful for screening for modulators of cyclic nucleoride eated ion channels, comprises the isolated cyclic nucleoride quind cation channel 3 beta subunit.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             in a computer system and for examining expression and regulation of cation channels. The present sequence is human CNG3B protein variant (D154N). Note: This sequence is not shown in the specification, but is derived from the human wild type CNG3B protein (SEQ ID NO:1) shown in Fig 4 of the specification (AAE15982)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              126
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             360
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   960
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           420

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to human cyclic nucleotide-gated cation channel 3 beta subunit (CNG3B) polypeptides and polymucleotides. CNG3B is a member of cyclic nucleotide-gated cation channel (CNG) family. CNG3B forms functional heteromultimers with CNG3L and/or CNG3A, two CNG alpha subunits that are expressed in retina. CNG3B polypeptides are useful for screening modulators of CNGs which are useful as contraceptives and for treating various disorders involving cation channels, e.g. vision disorders and male infertility. Polymucleotides of the invention are useful for transfection of cells in vitro and in vivo, to correct

                                                                                                                                                                                                                                                                                                                                                                                                                                                     9
acquired and inherited genetic defects, cancer and viral infections. Sequences of the invention are useful as reporter molecules in assays and detection systems, to measure changes in cation concentration, membrane potential, current flow, ion flux, transcription, signal transduction, reporter-ligand interactions and second messenger concentrations, in viro, in vivo and ex vivo. They are useful to construct models of CNGs in a computer system and for examining expression and regulation of cation channels. The present sequence is human CNG3B protein variant (GRB2S). Note: This sequence is not shown in the specification, but is derived from the human wild type CNG3B protein (SEO ID NO:1) shown in Fig 4 of the specification (AAE15982)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                TWYEYTWDSQRMLDESDLLKTLPTTVQLALAIDVNFSIISKVDLFKGCDTOMIYDMLLRL

This sequence represents a wild type human cyclic nucleotide-gated (CNG) channel. The rat CNG channel sequence, CNGA2, may be mutated to form the invention which comprising a sequence concoding a mutant CNG channel comprising at least one mutation that decreases divatent cation-mediated blockage of cation flux, and at least one mutation that makes the channel more sensitive to cAMP than a channel that decenting changes in intracellular levels of CAMP, comprising expressing in a cell the polymucleotide cited above, and measuring cativity of the channel, where activity of the channel, is indicative of changes in intracellular cAMP; (D) detecting activity of a GPCR, comprising expressing the CNG channel and the G-protein coupled receptor (GPCR) in host cell transformed with the nucleotide of the invention, and measuring activity of the Channel, where activity of the channel coupled receptor (GPCR) in host cell transformed with the nucleotide of the invention, and comprising contacting a cell with a compound wherein the call expresses that the compound is a ligand for the creeptor and the mutant CNG channel cited above, and measuring activity of the CNG channel cited above, and measuring activation of the CNG channel, where activation of the CNG channel contacting the transformed host cell with the agent and a ligand for the receptor, and measuring activation of the CNG channel. The methods and contacting the transformed host cell with the agent and a ligand for the receptor, and measuring activation of the CNG channel. The methods and contacting the transformed host cell with the agent and a ligand for the receptor, and measuring activation of the CNG channel. The methods and contacting the transformed host cell with the agent and a ligand for the receptor, and measuring activation of the CNG channel. The methods and contacting the transformed host cell with the agent and a ligand for the receptor, and measuring activation of the CNG channel and was and other indicators, including novel CNG mutants for cell-based 
New isolated polynucleotide encoding a mutant cyclic nucleotide-gated (CNG) channel having a mutation that decreases divalent cation-mediated blockage of cation flux, and makes the channel more sensitive to cAMP.
                                                                                                                                                                                                                                                              Disclosure; SEQ ID NO 14; 156pp; English
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        purposes

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     channel. The rat CNG channel sequence, CNGA2, may be mutated to form the isolated polynucleotide of the invention which comprising a sequence concoting a mutation that according a mutation that decreases divalent cation-mediated blockage of cation flux, and at least one mutation that makes the channel comprising at least one mutation that makes the channel more sensitive to cAMP than a channel comprise the mutation. The invention includes methods for:

(a) detecting changes in intracellular levels of cAMP, comprising expressing in a cell the polynucleotide cited above, and measuring cativity of the channel, where activity of the channel, where activity of the channel and the G-protein coupled receptor changes in intracellular cAMP; (b) detecting activity of a GPCR, comprising activity of the channel and the G-protein coupled receptor (GPCR) in host cell transformed with the nucleotide of the invention, and indicates activity of the GPCR; (c) identifying of the channel compound wherein the cell expresses the receptor and the mutant CNG channel cited above, and measuring activity of the GPCR; (c) identifying of the cransformed host cell with a compound wherein the coll expresses contacting the transformed host cell with the agent and a ligand for the receptor; and measuring activity mediated by a GPCR, comprising contacting the transformed host cell with the agent and a ligand for the receptor; and measuring activation of the CNG channel, the methods and compositions of the present invention are useful in cellular physiology, in particular for cell-based assays that employ calcium and voltage-based dyes and other indicators, including novel CNG channel and hast cell was a such as such as a such as a sham, hypertension, allergic reactioning and hast reactive expective chicked and experienced the activity of GPCR in disorders and down allergic measuring the activity of GPCR in disorders and down and an activity of solid contactine assays, and for measuring the activity of GPCR in disorders and experience.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            VEDTDADSCPLMAEENPPS--TVLPPPSPAKSDTLIVPSSASGTHRKKLPSEDDEAEELK 520

The invention relates to a chimeric peptide (I) for direct determination of CAMP concentration in vitro and/or in vivo. (I) comprises: (a) a cAMP binding givoup having only one CAMP binding give (b) at least two detectable labels is least two detectable labels, where a first of the two detectable labels is located at the amino terminus of the cAMP binding group of (a). Also concentration (II) a noncious of the cAMP binding group of (a). Also concerted (1) a nucleic acid molecule (II) encoding (II) (2) a vector (III) comprising (II); (3) a host (IV) transformed with (III) or transfected with (III); (4) producing (MI) the chimeric peptide comprising culturing/raising (IV) and optionally, isolating and/or purifying the produced chimeric peptide; and (5) a kit comprising any one of (I)-(IV), or or organs or calls of a non-human transgenic animal of (IV), (I) is useful for determining the concentration of cAMP in a sample, which involves adding (I), or (IV) to the sample, and measuring/recording fluorescence energy transfer (FRET) or bioluminescence concentration in the sample by comparing values of the fluorescence emission with a cresonance energy transfer (BRET) and determining cAMP concentration in the sample by comparing values of the fluorescence emission with a comparing values of the fluorescence emission with a concentration of cAMP in a living cell or a concentration of cAMP in a living cell or a mount/distribution/location/fluctuation of cAMP in a living cell or a condicate animal of (IV) or organs or cells of concentration cells of concentration of camp signaling in the present concentration of the present invention.

Congenesis or pathogenesis of diseases of an organ. The present congeneration of the present invention. --SPONKP-----PAAP------PAAP-------VINEYADAQLHNLVKRMRQRTALY 146 185 ALSPAESPVVAWSDPTTPKDTDGQDRAASTASTNSAIIND----RLQELVKLFKERTEKV 240 241 KEKLIDPDVTSDEESPKPSPAKKAPEPAPDTKPABAEPVEEEHYCDMLCCKFKHRPWKKY 300 260 DIIYLYDMLFIQPRLQFVRGGDIIVDSNELRKHYRTSTKFQLDVASIIPFDICYLFFGFN 320 PMFRANRMLKYTSFFEFNHHLESIMDKAYIYRVIRTTGYLLFILHINACVYYWASNYEGI 380 14 IGENNENEQSSRRNEEGSHPSNQSQQTTAQE -- ENKGE--- EKSLKTKSTPVTSEEPHTN 201 LKRIKLPNSIDSYTDRLYLLWILLVTLAYNWNCWFIPLRLVFPYQTADNIHYWLIADIIC KKKLVEGDLS----SPEASPQTAKPTAVPPVKESDDKPT--EHYYRLLWFKVKKMPLTEY Indels 110; 69 IODK-----LSKKNSSGDLTTNPDPONAAEPTGTVPEQKEMDPGKEGPN-Length 909; Local Similarity 46.2%; Pred. The invention relates to novel diagnostic and therapeutic polynucleotides selected from one of the 272 sequences defined in the specification. A polynucleotide of the invention may have a use in gene therapy. The human diagnostic and therapeutic polynucleotides (dithp) or polypeptides may but Ω; Gietzen New diagnostic and therapeutic polynucleotides and polypeptides, useful in diagnosing a condition, disease or disorder associated with human molecules, e.g. autoimmune or inflammatory disorders, in gene therapy in gene mapping.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          681
       with human molecules, e.g. cell proliferative disorders, autoimmune/Inflammatory disorder, developmental disorders, endocrine disorder, neurological disorders, developmental disorders, endocrine infections caused by virus, bacteria, fungi or parasite. The diths molecules may also be used in genetic mapping, in identifying individuals from minute biological samples, in detecting single nucleotide polymorphisms, as molecular weight markers, and for somatic or germline gene therapy. The present sequence represents a dithp protein of the invention. Note: The sequence date for this patent is not represented in the printed specification, but was obtained in electronic format directly from WIPO at www.wipo.int/pct/en/sequences/listing.htm

reaction (PCR) primers, oligomers, and for chromosome and gene mapping, reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynuclecuides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal cetivity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food polypeptide in tissue, as molecular weight markers and as a food involving aberrant protein expression or biological activity. The involving aberrant protein expression or biological activity. The diagnostics, forensics, gene mapping, identification of mutations cresponsible for genetic disorders or other traits to assess biodiversity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ..

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      invention relates to isolated polynucleotide (1) and polypeptide (11)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  and to produce other types of data and products dependent on DNA and amino acid sequences. ABG00010-ABG30377 represent novel human diagnostic amino acid sequences of the invention. Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at the wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess
                                                                                                                                                                                                                                                                                                                  forensic;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           47:

                                                                                                                                                                             The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidaring cell signalling and call-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16176-ABL30511), expressed DNA sequence data for this patent did not form part of the printed specification, but was obtained in electronic form part of the from WIPO at ftp.wipo.int/pub/published_pct_sequences

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to isolated polymucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed cannot seem of (II) as useful in gene therapy techniques to restore normal cartivity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polymucleotide sequences have applications in diagnostics, forenise, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and and cannot are application or acid sequences. Abgoloulo-Abg30377 represent novel human diagnostic and or produce other types of data and products dependent on DNA and and applications or a sequences. Abgoloulo-Abg30377 represent movel human diagnostic and polymers in the produce other types of data and products dependent on DNA and and applications and sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              amino acid sequences of the invention. Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess
                                                                                                                                                                                                                                                                                                 1; chromosome mapping; gene mapping; gene therapy; forensic; supplement; medical imaging; diagnostic; genetic disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Claim 20; SEQ ID NO 35825; 103pp; English.

The rat CNG channel sequence, CNGA2, may be mutated to form the isolated polynucleotide of the invention which comprising a sequence encoding a mutant CNG channel comprising at least one mutation that decreases mutation comprise the channel more sensitive to cAMP than a channel that does not comprise the mutation. The invention includes methods for: (a) detecting changes in intracellular levels of cAMP, comprising expressing in a cell the polynucleotide cited above, and measuring activity of the channel, where activity of the channel is indicative of changes in intracellular cAMP; (b) detecting activity of a GPCR,

GGPCR) in host cell transformed with the nucleotide of the invention, and measuring activity of the channel, where activity of the channel indicates activity of the Channel, where activity of the channel compound wherein the cell expresses comprising contacting a cell with a compound wherein the cell expresses the receptor and the mutant CNG channel cited above, and measuring activation of the CNG channel, where activation of the CNG channel cited above, and measuring activation of the CNG channel is a ligand for the receptor; (d) identifying a agent that modulates an activity mediated by a GPCR, comprising contacting the transformed host cell where cNG channel. The methods and creeptor, and measuring activation of the CNG channel. The methods and compositions of the present invention are useful in cellular physiology, in particular for cell-based assays that employ calcium and voltage-based dyes and other indicators, including novel CNG mutants for cyclic compositions of the measuring the activity of GPCR in disorders such as asthma, hypertension, allergic reactions, gastrointestinal cliented assays. This sequence was included in the specification for comparison
                                                                                                                                                                                                                                                                                                                                                                                                                                             9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                               264
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               555
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 615

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chomosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed cartivity of (II) as useful in gene therapy techniques to restore normal cativity of (II) as useful for generating antibodies against it, detecting or quantitating useful for generating antibodies against it, detecting or quantitating oblypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving abberrant protein expression or biological activity. The polypeptide and polynuclectide sequences have applications in diagnostics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. ABG00010-ABG30377 represent novel human diagnostic amino acid sequences of the invention. Note: The sequence data for this patent did not appear in the printed specification, but was obtained in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       103
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  163

The present invention relates to a nucleotide sequences encoding human CONCI, OCNC2, or betalb olfactory cyclic nucleotide gated (CNG) channel subbunit, its action being an olfactory CNG channel activity modulator. A host call which expresses human OCNCI, OCNC2 and/or betalb is useful in a mammalian cell-based assay for the profiling and screening of putative modulators of a human olfactory cyclic nucleotide gated (CNG) channel. The method is used to identify a compound as one which particularly modulates CNG activity based on a detectable change in fluorescence. The test cell expresses each of the human OCNCI, human OCNC2 and human betalb subunits. A fluorescence plate reader or a voltage imaging plate are used to monitor changes in fluorescence. The compounds that activate olfactory CNG channel enhance smell and can be used to make foods more palatable for individuals with attenuated olfactory function. The present acquence represents the amino acid sequence of human betalb
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     596
